DRUGS COVER UP SYMPTOMS.

Because headaches are so common, some people think that getting a headache is just a normal part of life!

Headaches are a sign that something's wrong.

Stress, toxic fumes, certain foods, preservatives, and alcohol are common culprits.

THERE ARE MANY TYPES OF HEADACHES.

A frequent and overlooked cause of headaches is the malfunction of spinal bones in the neck and upper back.

When bones of the spine lose their normal position or motion, sensitive nerves and blood vessels to the head can be affected. When spinal nerves and related tissues are stretched or irritated they can produce throbbing headaches. Aspirin and medications may cover up these warning signs, but do not correct the underlying structural cause.

Many people find relief and correction with chiropractic care.

If a thorough examination reveals reduced range of motion, loss of normal spinal curves, or mechanical restrictions, chiropractic care should be considered. After a complete explanation, you'll receive a care program designed for your unique spinal problem.

Many patients report headache relief. Others find that the correction of their problem takes longer because their spinal problem has existed undetected for many years. Every patient responds differently. Regardless of how you respond, enjoy the drug-free results millions have enjoyed by consulting a chiropractic doctor.

THE CHIROPRACTIC LIFESTYLE

A continuing schedule of regular chiropractic checkups can help detect, correct, and maintain optimum spinal and nervous system function. Find out how chiropractic care, combined with proper diet, exercise, and other aspects of good health and personal hygiene can enhance your well-being and help you enjoy life to the fullest. Ask your Doctor of Chiropractic for a care program designed for your age, condition, and lifestyle.
